

Sotiris Sotiriou

Full-Stack Software Engineer | Co-founder & Founding Engineer

Limassol, Cyprus | s.sotiriou62@gmail.com | +357 99 258315 | [LinkedIn](#) | [GitHub](#)

Profile

Full-stack engineer and founder experienced in taking products from concept to production, designing high-integrity financial systems, and owning delivery across web, iOS, and Android. Combines hands-on engineering with architecture, code review, mentoring, product planning, and production operations.

Experience

Co-founder & Founding Engineer

Sep 2025 – Present

Limassol, Cyprus

ODO (Odometer Data Observer)

- Co-founded a vehicle-care product and took it from a hackathon prototype to a public launch in approximately one month; shipped its iOS app in June 2026 and continues developing Android using Hotwire Native.
- Operates as the sole software engineer, owning architecture, web and native development, PostgreSQL data modelling, testing, CI/CD, deployments, monitoring, store releases, production support, and the technical roadmap.
- Architected a unified billing and entitlement layer across Stripe, Apple App Store, and Google Play, normalising provider data into one subscription model with device-aware purchase flows and caching.
- Built deterministic maintenance forecasting that asynchronously recalculates future service estimates when users revise historical vehicle events.

Mid Full-Stack Software Engineer

Jul 2023 – Present

Limassol, Cyprus

Factory39 — promoted from Junior in Jul 2024

- Develops Balabook, a Ruby on Rails accounting platform for Cypriot SMEs and accountancies, using ERB, Tailwind CSS, PostgreSQL, Sidekiq, Minitest, and Capybara.
- Designed and implemented the GoCardless banking integration and bank-reconciliation architecture from scratch.
- Delivered precision-critical accounting functionality including VAT returns, payroll, and financial reports; integrated Rails with Balabook's LangGraph AI chat service and contributed to its Expo mobile apps.
- Provides technical leadership in a three-engineer team through architecture, planning, code review, mentoring, release coordination, and stakeholder communication, while partnering with the product manager on backlog priorities and task allocation.

Undergraduate Teaching Assistant

Sep 2022 – Jan 2023

The University of Sheffield

Supported Computer Science laboratory sessions, guiding students through planning, development, debugging, and deployment and introducing object-oriented programming in Java.

Full-Stack Software Engineer Intern

Jun 2022 – Sep 2022

Factory39

Built internal and client Rails applications and contributed to containerisation with Docker and Kubernetes in an agile delivery environment.

Open Source Contributions

- CV Agent Builder** — open-sourced an evidence-first toolkit for AI-assisted career interviews and reproducible generic or job-specific LaTeX CV generation.
- Frozen String Literal Ruby** — built a TypeScript VS Code extension that adds Ruby's frozen-string-literal comment on open or save while respecting existing comments and exclusions.
- InitMate** — built a TypeScript VS Code extension that extracts Ruby method parameters and adds missing instance-variable assignments without duplication.

Technical Skills

Core	Ruby, Ruby on Rails, Hotwire, Turbo, Stimulus, ERB, JavaScript, TypeScript, Tailwind CSS
Backend & Data	PostgreSQL, Sidekiq, API design, database modelling, Devise, LangGraph integrations
Mobile	Hotwire Native, Swift/iOS, Kotlin/Android, Expo, React Native
Testing & Delivery	Minitest, Capybara, GitHub Actions, Sentry, Railway, Docker, Kubernetes
Integrations	Stripe, Apple App Store, Google Play, GoCardless

Education

BSc Computer Science

Sep 2020 – Jul 2023

Sheffield, UK

The University of Sheffield — First Class Honours

Dissertation: source-code editor extension assisting developers in repairing visual bugs in responsive web pages.
